MAIN INNOVATIONS IN OUR RESCUE LINE ROBOT

ELECTRONICS

ROBOT STATE LOGIC (CODE FLOW)

```
robot_state = LINE_FOLLOW
while robot_is_running:
    read_line_sensors()
    read_exit_sensors()
    read_IMU()
    read_gripper_sensors()
    if robot_state == LINE_FOLLOW:
        follow_line()
    elif silver_strip_detected():
        robot_state = EVAC_ENTER
    elif obstacle_detected():
        robot_state = OBSTACLE_AVOIDANCE
    elif intersection_detected():
        robot_state = INTERSECTION_DECISION
    elif line_gap_detected():
        robot_state = GAP_RECOVERY
    elif ramp_detected():
        robot_state = RAMP_TRACTION_CONTROL
    elif black_exit_detected():
        robot_state = EVAC_EXIT_SEARCH
    elif black_exit_detected() and exit_allowed == false:
        void_exit()
    elif rescue_complete():
        robot_state = EVAC_EXIT_SEARCH
```
