Hardware

Chassis:

The chassis is made by the turntables in Lego placed in between the Spike Prime hub & back motors.

Kit Deployment:

The 3D models made for deploying the kits left and right separately with the single hole on a cylinder.
ex) Geneva drive

Robot Revolution

1st hardware :

it is designed as a chassis on the middle for better movement over obstacles.

Improvements:

Added more models & sensors
ex) kits, cameras, ultra sensor, etc.

Final:

Final hardware includes all the models that were made by 3D & OpenMV hubs & sensors.

SIMPLE Rescue Maze

VL53L4CD
ultra sensor

OpenMV H7

Touch
Sensors

OpenMV H7

Spike Prime motor

Geekservo
programmable
2kg motor (blue)

Software

OpenMV

Camera program Software:
identify color & letters and send it over main program

Visual Studio Code

Main program & logics.
responsible for main programs for the hardware & complete the missions based on the info. given by OpenMV.

Algorithms
