

BCL Barcelinhos

Bill of Materials

RoboCup Junior Rescue Simulation 2026

Since BCL Barcelinhos competes in the simulation sub-league, the project has no physical hardware components. All materials are software tools used during development and competition.

Table 1: Software Bill of Materials

Software / Tool	Description	Author	Price
Webots R2023b	Open-source robot simulation platform used to run the Erebus competition environment	Cyberbotics Ltd.	Free
Erebus v26.0.0	RoboCup Junior Rescue Simulation environment; provides the maze worlds, scoring supervisor, and robot API	RoboCup Junior Rescue TC	Free
Erebus Robot Customiser	Web tool used to configure the robot sensor loadout and generate <code>robot.json</code>	RoboCup Junior Rescue TC	Free
Python 3.11	Programming language used for the entire controller codebase	Python Software Foundation	Free
Visual Studio Code	Code editor used to write and debug the controller	Microsoft	Free
Git	Version control used to manage controller iterations across team members	Open Source	Free
Claude Code	AI coding assistant used to support development, debugging, and documentation	Anthropic	Free

Total cost: \$0
